PROFESSIONAL SUMMARY

Full-stack engineer with 2.5 years building airport operations software end-to-end across Laravel backend, React frontend, and React Native mobile, owning modules from database schema to production deployment.

EXPERIENCE

Vesta

Software Development Engineer II

Software Development Engineer I

Software Developer Intern

Jan 2024 - Present

Jul 2025 - Present

Jul 2024 - Jun 2025

Jan 2024 - Jun 2024

- Solely built a React Native (Expo) mobile application for airside vehicle operations from greenfield to Android deployment, including real-time Pusher integration, Firebase FCM push notifications, shift lifecycle management with photo capture, and EAS build pipeline.
- Designed and built end-to-end feature modules on a multi-airport operations platform, owning database schema, Laravel REST API, and React frontend for systems including the Vendor SLA Tracker, AODM safety observation system, EM Shift Brief, and several others, each delivered from first migration to production.
- Implemented multiple third-party CRM and feedback integrations, including an OAuth2 client-credentials flow with Salesforce (DB-cached tokens, retry-on-401), a real-time feedback push integration replacing a polling model, and a third integration with custom CRM code mapping tied to template-defined area configurations sent in the request payload.
- Implemented Azure AD SSO using Laravel Socialite for enterprise airport clients, enabling organisation-wide single sign-on with stateless auth, email normalisation, and token-based frontend redirect.
- Built a low-rating burst alert service using Laravel Cache's atomic add() to prevent duplicate alert emails under concurrent load, with configurable per-template thresholds and sliding window detection.
- Resolved full-table scan performance issues on the platform's highest-volume table by introducing a FULLTEXT index on a computed column and correcting an OR clause that caused the query optimizer to bypass existing indexes.
- Migrated Firebase Cloud Messaging from the deprecated legacy API to FCM v1 using service account JWT authentication with DB-backed token caching to avoid per-request OAuth2 round-trips.
- Authored 34+ database migrations over 2 years spanning new table creation, schema extensions, and column-level changes across the full platform, covering airport operations, feedback systems, CRM integrations, notification infrastructure, access control, and deployment management.

SKILLS

Languages: PHP, JavaScript, TypeScript, SQL, Java

Frameworks & Libraries: Laravel, React.js, React Native (Expo)

Databases: MySQL

Tools & Integrations: Git, Postman, Firebase FCM, Pusher, EAS Build

EDUCATION

Birla Institute of Technology, Mesra

Master of Computer Applications (MCA)

2022 - 2024

Birla Institute of Technology, Mesra

Bachelor of Computer Applications (BCA)

2018 - 2021
